

Your **free** and
eco-friendly hot water

Boost your energy savings with
Boosterm by using the waste heat from
your refrigeration systems.

BOOSTHERM[®]
Heat Recovery Systems

Récup'CO₂ and Packaged solutions.

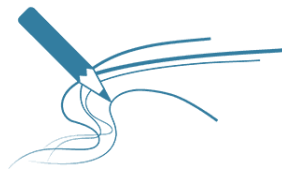

Customised solution consisting of the supply of all the components necessary for the deployment of heat recovery on CO₂ transcritical refrigeration plants.

The Récup'CO₂ solution is based on a customised control box and integrates other references from the Boosterm range such as DHW or primary storage tanks, air heaters and associated accessories to finally get a complete package ready to install.

By offering you packaged and customised solutions, Boosterm adapts to your needs.

CO₂ compatible.

Customised.

Time saving.

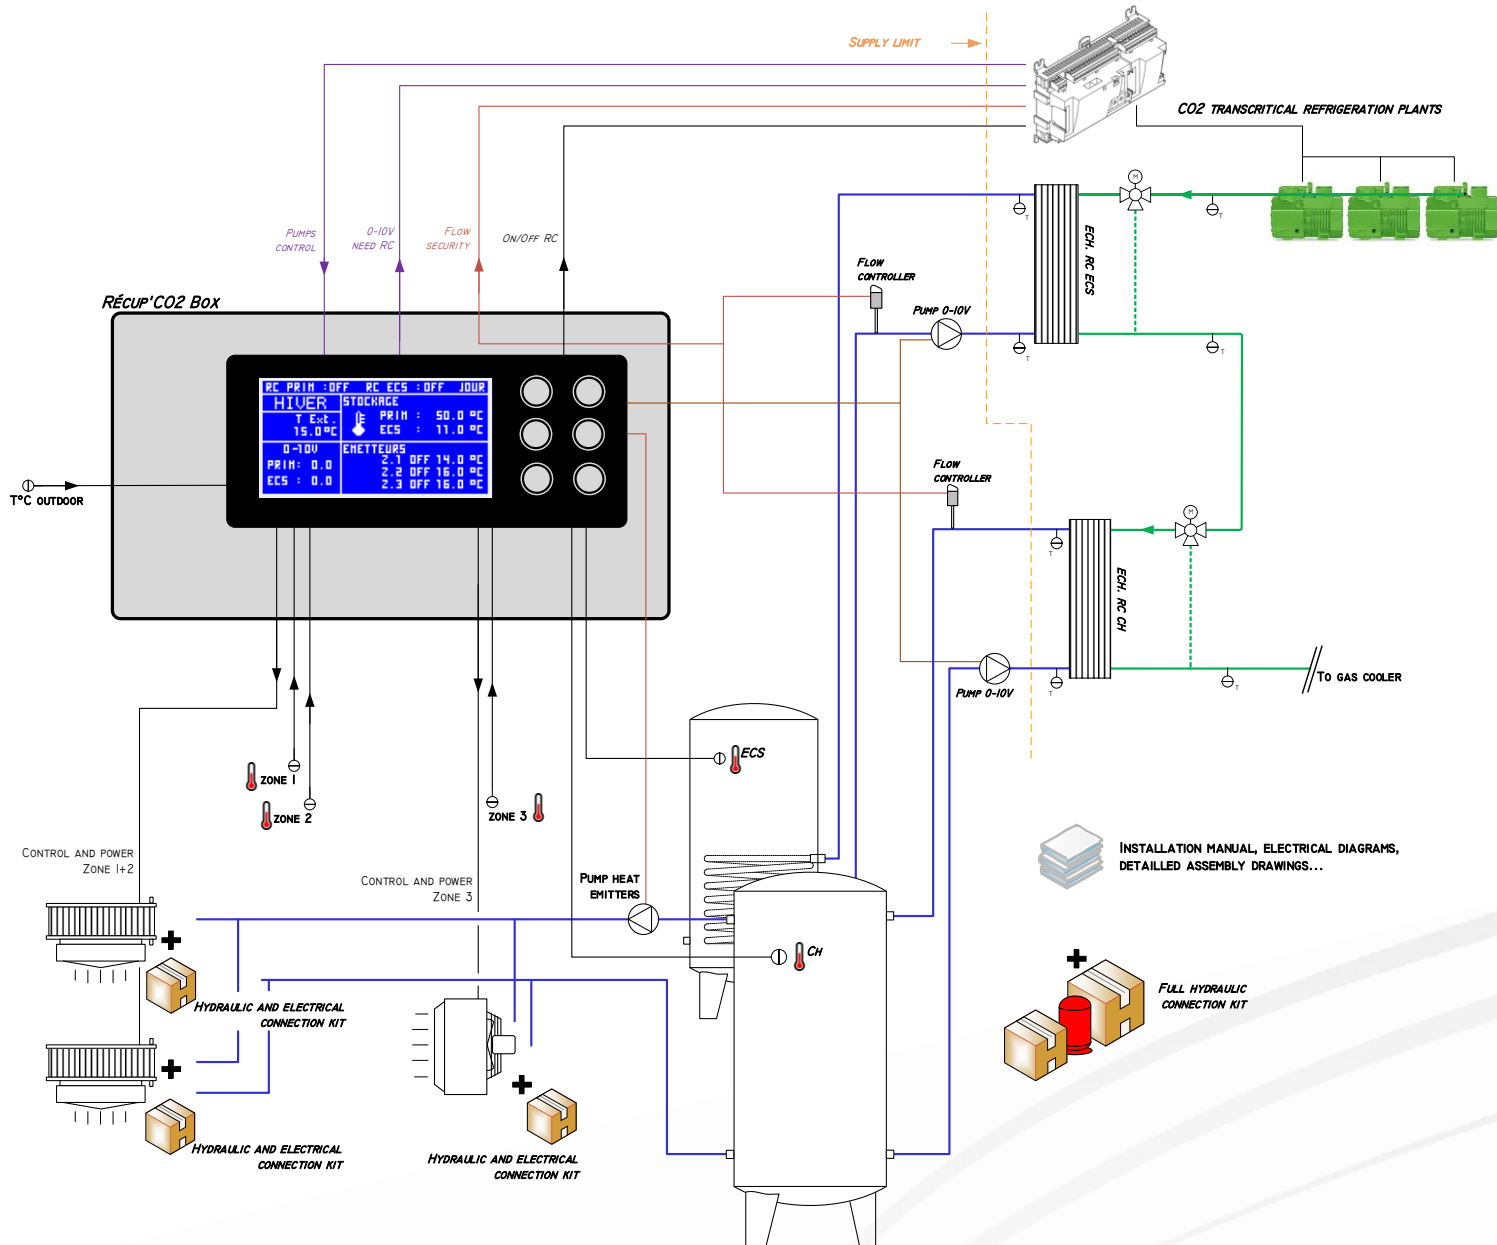

Effective. Pre-sized package for faster on-site deployment

Simple. Package delivered with a specific technical file dedicated to your installation

Smart. Récup'CO₂ solution communicating with the regulation of CO₂ plant

Cost-effective. Reduces the customer's energy bill

PACKAGES / Récup'CO2 – Facilities heating and preheating of DHW.
