

Your **free** and
eco-friendly hot water

Boost your **energy savings** with
Boosterm by using the waste heat from
your refrigeration systems.

BOOSTHERM[®]
Heat Recovery Systems

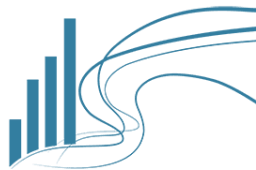

To produce the cold for your process (cold rooms, cooling tunnels...), your refrigeration units have to extract the heat and then reject it into the air. This energy is then lost.

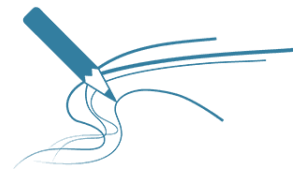

Thanks to innovative technological process, Boosterm captures up to 100% of this heat to produce **free** hot water needed for cleaning and operation of your facilities. The heating of your premises can also be considered.

Energy optimisation.

Money savings.

Customised solution.

Cost-effective. Reduces your energy bill in a reliable and predictable way thanks to our simulation tools

Innovative. Patented and smart Boosterm process, Plug & Play solutions

Custom. Tailor-made project according to the needs

Sustainable.

References.

INDUSTRIAL SALTING

- Equipment for positive cold unit
- 8 400 liters of hot water per day at 55°C
- 98 901 kWh of savings per year or 8 901€ saved
- Testament available on our YouTube account

PANCAKE FACTORY

- Equipment for negative cold unit
- About 60 000 liters of hot water per day at 55°C
- 959 760 kWh of savings per year or 38 390€ saved

SLAUGHTERHOUSE

- Equipment for positive cold unit
- 12 000 liters of hot water per day at 55°C
- 156 000 kWh of savings per year or 6 240 € saved
