

Your **free** and
eco-friendly hot water

Boost your energy savings with
Boosterm by using the waste heat from
your refrigeration systems.

BOOSTHERM[®]
Heat Recovery Systems

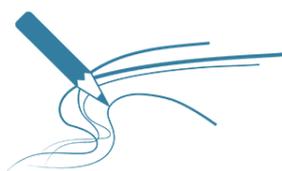

To cool your cold rooms, your refrigeration systems have to extract heat and then reject it outside. Then this energy is lost.

Thanks to an innovative technological process, Boosterm captures up to 100% of this heat to produce **free** hot water needed for cleaning and operation of your facilities. The heating of your premises can also be considered.

Free hot water.

Reduced operating costs.

Energy optimisation.

Cost-effective. Reduces your energy bill in a reliable and predictable way thanks to our simulation tools

Efficient. Up to 100% of energy recovered

Innovative. Patented and smart Boosterm process, Plug & Play solutions

Sustainable.
